

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning at page 7, line 7 with the following amended paragraph:

Figure 2 is a block diagram of a remote control device 30 with an automatic positional mode of operation changer according to another embodiment of the present invention. The remote control device 30 may include a housing 32 and an input device 36. Also, the remote control device 30 is similar to the remote control device 10 described hereinbefore in conjunction with Figure 1 with the exception that the remote device 30 in Figure 2 also includes a motion detector 40 that detects a different type of motion than that of the motion detector 20 in Figure 1. The remote control device 30 also includes a directional mode indicator 44. The motion detector 40 may be a gravity switch or any gyroscope-type device that can detect changes from horizontal in at least two degrees of freedom.

Please replace the paragraph beginning at page 13, line 14 with the following amended paragraph:

Figure 5 is a block diagram for a universal remote feedback device 120 according to another embodiment of the present invention. The universal remote feedback device 120 is programmed to respond to the signals sent by a consumer electronic (CE) device and its corresponding remote control device as a means of feedback to input entered into the remote control device. The universal remote feedback device 120 is similar to the remote control device

10 described hereinbefore in conjunction with Figure 1. The device 120 may also include a housing 122, an input device 126, a receiver 128, a speaker 132, and a display device 136.
